Re: Proposed Research Project

Dear Mr. Barlettani:

It was a pleasure meeting you at your office in Fairfield. We are very excited by the preliminary testing with your Coherence Technology products and their effect on brain wave functioning in individuals. Experiments show specific organization of electrical activities, i.e., brain wave activity becomes more orderly. This correlates with the subjective experience and the proposed theory, which means more creativity, less stress, greater productivity and improved health.

Based on these findings, we are proposing a more extensive research project with the intention of presenting our findings to the international scientific community through periodic scientific literature and conferences.

We will continue to research this technology in several ways because we feel we have just scratched the surface of its potential.

Sincerely,

Nicolai Nicolaivich Lyubimov
